## Profi'C Manufacturing Enterprise Resource Planning Software

Manage all your Manufacturing ERP functions with one integrated system. Profi'C software programs serve the needs of finance as well as it does the people in customer service taking the order or by online e-commerce, and in the warehouse. Each of those departments typically has its own computer system optimized for the particular ways that the department does its work. But Profi'C combines them all together into a single, integrated software system that runs off a single database so that the various departments can more easily share information and communicate with each other.

When your customer service rep enters a customer order into the Profi'C MFG ERP system, the rep has all the information necessary to complete the order, the customer's credit rating and order history, the company's inventory levels from the warehouse and the shipping dock's logistics. Run a purchase order through the Profi'C system, from order entry through shipping and receipt of payment and you get the whole picture.

Built-in scalability lets you add products, production sites or warehouses, and make other changes as your business grows. Information or portions thereof can be password protected for those who need to know.

Five key components of the Profi'C ERP system will make your productivity soar higher than all your competitors, and your customers completely satisfied:

☐ **Integrated Customer Orders** – from online e-commerce to internal orders, rather than scattered information among many different systems that can't communicate with one another, companies can keep track of orders more easily, and coordinate manufacturing, inventory and shipping among many different locations at the same time. This automation charges the customer by invoice billing or credit card, creating the Accounts Receivable and customer history and updating General Ledger. Faster Cash Collection as a result of billing in real time, and with integrated e-billing sent by email.

☐ **Manufacturing Process** – Schedule the activities necessary for production including labor and components to output the product. Speed up your manufacturing process by automating the functions within the process, Bar Code, Serialization, RFID.

# Profi'C Manufacturing Enterprise Resource Planning Software

☐ **Reduce Inventory** – Visibility of the inventory process leads to reduced inventories. Interactive forecasting and Work-in-progress inventory can help users better plan deliveries to customers, reducing the finished good inventory at the warehouses and shipping docks.

☐ **RMA - Return Materials Authorization** Automated and validated return of the defective or excess product back into inventory or scrap. Tracking reports.

☐ **Integrated Financial Solution** – Faster Cash Collection as a result of billing in real time. Customer preferred forms from paper to electronic. E-Invoicing, E-Purchasing faster, less expensive, more reliable, more profit. Your customers can pay by credit card. Let your CEO, finance staff know your true overall financial performance and cost of goods sold.
