**Outperform your Competitors with Profi'C SCM**

## Profi'C Supply Chain Management System (SCM)

The Profi'C Supply Chain Management System (SCM) supports the Distributor, Retailer or Wholesaler, with single or multiple branch operations and/or locations managing its supply chain operation and supports its overall business objectives.

A completely integrated suite of software modules automates the Distribution process from start to finish. Beginning with product acquisition - Purchasing through-to Inventory management - Sales Order creation, Invoicing and Accounts Receivable. Orders taken through your on-line store will make it to Profi'C.

Built-in scalability lets you add products, locations or warehouses, and make other changes as your business grows. Information or portions thereof can be password protected for those who need to know.

Six key components of the Profi'C SCM will improve your ability to predict demand from customers; communicate with your suppliers for the best price performance, and make your own supply chain run smoothly:

► **Manage** your resources that go toward meeting your customer demand for product and services.

► **Source your suppliers.** Manage the inventory of goods and services you receive from your suppliers – receive shipments in the warehouse, PO by Sales Order, and authorize vendor payments. Automate the process with bar code, lot, bin and serial number tracking. EDI -  automate your interactions with trading partners.

► **Manufacturing** – If you manufacture products, schedule the activities necessary for production including labor and components to output the product. (See Profi'C MFG ERP)

► **Logistics** – coordinates the receipt of orders from the customer *including web orders*, develop a network of your warehouses, pick/pack products with integrated shipping methods.  This automation charges the customer by billing invoice or credit card creating the Accounts Receivable and customer history while updating General Ledger.

► **RMA** - **Return Materials Authorization** validated and automated return of the defective or excess product back into inventory or scrap. Tracking reports.

► **Integrated Financial Solution** – Faster Cash Collection as a result of billing in real time. Customer preferred forms from paper to electronic. E-Invoicing, E-Purchasing faster, less expensive, more reliable, means more profit. Your customers can pay by credit card. Let your CEO, finance staff know your true overall financial performance and cost of running your business.
